Abstract

Preparation having improved therapeutic breadth, comprising nucleotide synthesis inhibitors

A preparation comprising a compound which essentially prevents the enterohepatic circulation of nucleotide synthesis inhibitors or antagonizes the action of the nucleotide synthesis inhibitors with a displacement in time and a nucleotide synthesis inhibitor such as brequinar, mycophenolatemofetil (2-morpholinoethyl (E)-6-(1,3-dihydro-4-hydroxy-6-methoxy-7-methyl-3-oxoisobenzofuran-5-yl)-4-methyl-4-hexenoate), methotrexate, mizoribine and compounds of the formulae I and II

(I)

(II)

is suitable for the treatment of immunological disorders, cancer or in transplantations.
