Title of The Invention: Strategy Determination Method, Apparatus, Device, and Storage Medium

Abstract

The embodiments of the present disclosure propose a strategy determination method, apparatus, device, and storage medium. The method comprises: extracting target condition information from a currently input user question by a large model, wherein the target condition information comprises a target condition slot name and a target condition slot value; determining a target decision path matching the target condition information from a pre-constructed decision path pool, wherein each decision path in the decision path pool comprises condition information and an execution strategy; and outputting the strategy information for replying to the user question by the large model based on the user question and the execution strategy in the target decision path.
