TITLE:

# INFORMATION PROCESSING APPARATUS, MACHINE LEARNING APPARATUS, INFORMATION PROCESSING METHOD, AND MACHINE LEARNING METHOD

## ABSTRACT

An information processing apparatus includes: an information acquisition part, acquiring recipe information indicating processing content of polishing processing and finishing processing, and transfer time information indicating a transfer time required for each transfer processing; and a schedule creation part, based on the recipe information and the transfer time information, creating a substrate processing schedule by determining a start timing of each processing so that a final processing end time during which a final substrate after the finishing processing is carried out to a substrate carry-out position is shortest.
