DISPOSABLE DIAPER

A disposable diaper includes transversely opposite side edge regions thereof and the side edge regions are folded to form pleats 18, 18 each presenting a Z-shaped cross section and a body waste disposal sheet 2 is bonded along its transversely opposite side edge regions to upper surfaces of the pleats 18, 18 so that the disposal sheet 2 may be separated from the diaper as the transversely opposite side edge regions of the diaper are held and bilaterally pulled by a person having charge of body waste disposal with his or her hands.

Refer to Fig. 1.
