(54) Title: DEVICE AND SYSTEM FOR FIXATION OF A SHELF ACCESSORY

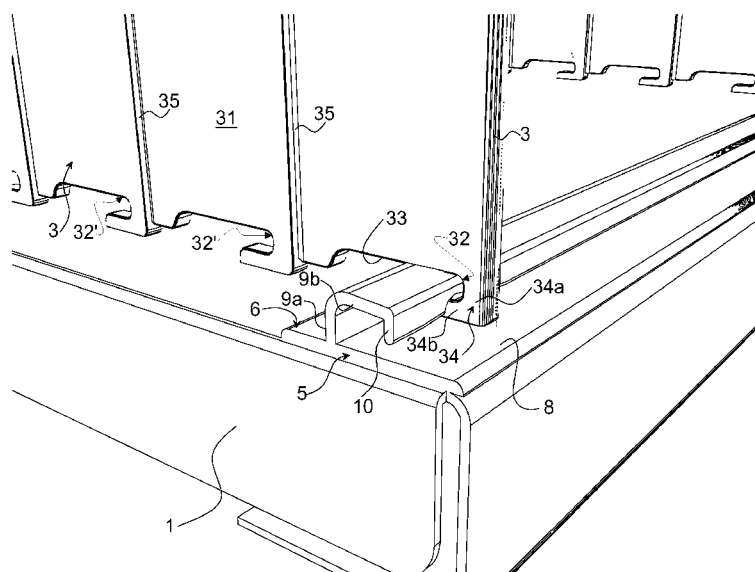

Fig. 3

(57) Abstract: Device for securing the rear end of a shelf accessory (3) to a shelf (1), comprising an elongated profiled element (6), which is configured for fixing on top of a shelf, substantially parallel with the shelf longitudinal direction, which profiled element has along its full length a substantially constant cross-sectional profile, with a lower base plate (8), a first arm (9a) projecting up from the base plate and a second arm (9b) projecting from the first arm. The device also comprises a friction rail (10), which is made of an elastic material and which extends along substantially the full length of the profiled element and projects downwards from the second arm.
