ABSTRACT

METHOD FOR PRODUCING CELL CULTURE

An object of the present invention is to provide a method for producing a cell culture containing desired cells induced to be differentiated from pluripotent stem cells, and a method for producing a sheet-shaped cell culture containing the cell culture, and the like. The above problem has been solved by a method for producing a cell culture containing desired cells induced to be differentiated from pluripotent stem cells, including seeding a cell population, in which embryoid bodies obtained by inducing differentiation from the pluripotent stem cells to the desired cells are dispersed, at a density reaching confluence or higher, the cell population containing the desired cells and cells having a high proliferation rate relative to the desired cells.
