

PSEUDO-VIRAL PARTICLES AND USES OF SAME**ABSTRACT**

The present invention relates to a type I or II transmembrane fusion protein comprising, successively:

- a) optionally, a signal peptide;
- b) a protein or a peptide of interest;
- c) a coiled-coil domain; and
- d) a domain for anchoring in the plasma membrane, consisting of a transmembrane segment and a cytosolic segment.

It also relates to the virus-like particles obtained with this fusion protein.
