

ABSTRACT

A main body; an outer tub disposed inside the main body; an inner tub rotatably disposed in the outer tub and having an opening; an exterior (24) cover disposed above the inner tub; a clothing loading opening provided to the exterior cover (24) and through which clothing is loaded; an outer lid (28) for opening and closing the clothing loading opening; and a ventilation opening (30) provided in a side surface of the outer lid (28) are included, in which the inner tub is ventilated through the ventilation opening (30).
10 With this, a washing machine that is capable of efficiently ventilating the outer tub and preventing water, duct, etc., from entering the inner tub from the ventilation opening, and has a good quality in the outer view is implemented.
