(54) Title: METHOD AND DEVICE FOR RECORDING MARKS IN AN INFORMATION LAYER OF AN OPTICAL RECORD CARRIER

(57) Abstract

A method and device are described for writing an optical record carrier, in which a mark representing recorded data is written in a record carrier by a sequence of radiation pulses. Additional power levels are introduced in between the cooling power level (18) and the erase power level (17) during the cooling period (22). This results in a reduced jitter of the marks written.
