

NOVEL (METH)ACRYLIC RESIN AND RESIN COMPOSITION UTILIZING SAME

ABSTRACT

The present invention proposes: a (meth)acrylic resin represented by formula (1); and a resin composition prepared using the (meth)acrylic resin. In the formula, the benzene ring Ar may be present or absent; a bond "a" represents a single bond or a double bond when the benzene ring Ar is absent; n represents an integer of 1 to 5; and R¹ represents a hydrogen atom or a methyl group. The (meth)acrylic resin can be applied suitably for adhesive agents, is easy to handle, and can achieve flexibility in designing of adhesive agents and high adhesion strength of adhesive agents.
