

## ABSTRACT OF THE DISCLOSURE

## ALARM TAG RELEASING DEVICE

An alarm tag releasing device used for a theft monitoring device including: a gate installed at a desired place and sets a theft monitoring region of a predetermined range by generating radio waves at a predetermined wavelength; and a buzzer tag attached to a commodity by a built-in lock mechanism so as not to be detached and has an alarm circuit operated by a built-in battery to sound an alarm on the basis of the radio waves at the predetermined wavelength received when the buzzer tag enters the monitoring region, wherein the device has an insertion part opened corresponding to the outer diameter of the buzzer tag into which the buzzer tag can be inserted, and the lock mechanism provided in the buzzer tag is unlocked by the insertion of the buzzer tag into the insertion part.
