(54) Title: SYSTEM AND METHOD FOR SECURING WIRELESS DATA

(57) Abstract: Systems and methods for operation upon a data processing device for handling secure data stored on the device. The device is configurable to communicate over a data channel with an external security information source. User identification information is received from the external security information source which identifies a user of the device. The device, based upon the received user identification information, determines whether the secure data stored on the device is to be accessed by a user of the device.
