ABSTRACT

INFORMATION STORAGE MEDIUM STORING TITLE AND ATTRIBUTE INFORMATION, REPRODUCING APPARATUS AND METHOD THEREOF

An information storage medium on which title and corresponding attribute information are stored, and a reproducing apparatus and method thereof. The information storage medium includes at least one title reproduced as a motion picture, and at least one unit of corresponding attribute information which indicates whether a user can control a title to be reproduced. The attribute information includes access type information which represents each title as “normal title” if the title is searchable by a user operation and represents each title as “hidden title” if the title is not searchable by the user operation. The access type information representing “hidden title” further includes information that indicates whether a title number of the title is displayed.
