(54) Title: DUAL TOILET ROLL DISPENSER

(57) Abstract: The invention is a toilet paper dispenser designed to hold two rolls of toilet paper. The dispenser has a housing containing a primary roll support and a secondary roll support. The secondary roll support is disposed parallel to and vertically above the primary roll support. The secondary roll support is connected to a release mechanism operative to lower the secondary roll support into a position to dispense toilet paper from its roll of toilet paper when the primary roll of toilet paper is exhausted. A roll guard prevents access to the secondary roll until the release mechanism has been activated. The release mechanism is automatically activated and released by a user-controlled trigger mechanism, preferably a lever, so that a user exhausting the primary roll of toilet paper may access the secondary roll without interfering with the dispenser.
