(54) Title: INFORMATION PROCESSING TERMINAL, INFORMATION PROCESSING METHOD, AND PROGRAM

FIG. 11

(57) Abstract: A terminal is disclosed including a receiving unit receiving list data specifying destination terminals with which the terminal initiates communications and status data representing statuses of the destination terminals; a creation unit creating a list to display identifiers of the destination terminals using the data, wherein a sequence in which the identifiers are arranged in the list is updated; and a display unit displaying the list including identifiers of the destination terminals and a cursor to select the identifier; wherein the display unit selects one of modes depending on whether one of the identifiers at a position is pointed to by the cursor in response to a user operation, and in one mode, the display unit maintains the cursor at the position despite a change in a position of the selected identifier resulting from the update, and in another mode, the display unit moves the cursor to a new position.
