(54) Title: SELF-PROPELLED CRAFT

(57) Abstract: The present invention relates a self-propelled craft with a U-shaped main body provided with two turbines (7), one on each flap (2) of the U-shaped main body, which propel the self-propelled craft (1) through turbine operation in a chamber (8) fed by water received by water intakes (4) which is ejected by the ejection openings (3), and which turbines (7) move inside the turbine operation chamber (8) adopting automatically one of two possible positions due to the casing (15) which is placed in two different positions within the turbine operation chamber (8), which positioning results from the placement of the device on the water being done by side A or B, the water intake being done through existing water entrances (4) on side A or B of the device.
