

ABSTRACT

A method and device for display of cardio-cerebrovascular disease, a computer device, and a storage medium are provided. According to sign information of a user, a type of cardio-cerebrovascular disease that the user suffers from is determined. According to the type of the cardio-cerebrovascular disease and the sign information of the user, a cardio-cerebrovascular disease animation corresponding to the type of the cardio-cerebrovascular disease, and a risk animation are drawn with a 3D animation engine. The cardio-cerebrovascular disease animation and the risk animation are displayed. With aid of the method, it is convenient for the user to know the cardio-cerebrovascular disease types and risks.
