

ABSTRACT

CONTAINER HANDLING VEHICLE, MEANS, SYSTEM AND METHODS

- 5 A container handling vehicle, a container handling means for the vehicle, a container handling system and methods of handling a container are disclosed. The vehicle comprises a container bed and a container handling means. The container handling means is configured to: contact a container; lever the container around a pivot point on the vehicle to raise from a floor a first floor
- 10 contact point of the container; and subsequently propel the raised container along the container bed. The first lever action may be undertaken before any part of the container has left the floor.
