(54) Title: ENHANCED CSI REPORTING ACTIVATION/DEACTIVATION OPERATION

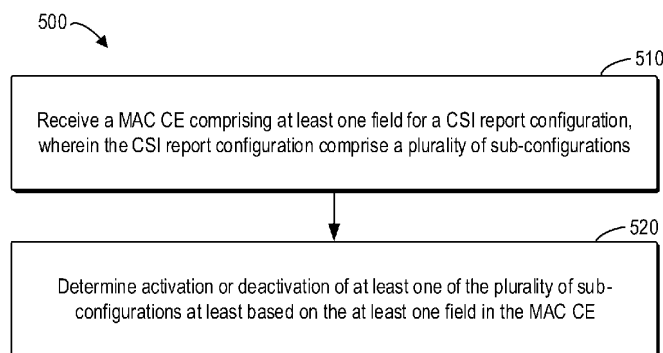

FIG. 5

(57) Abstract: Example embodiments of the present disclosure provide solutions for enhanced channel state information (CSI) activation/deactivation operation. In an example method, a terminal device receives a MAC CE comprising at least one field for a CSI report configuration, wherein the CSI report configuration comprises a plurality of sub-configurations. The terminal device further determines activation or deactivation of at least one of the plurality of sub-configurations at least based on the at least one field in the MAC CE. In this way, the operation of activating/deactivating CSI reporting for one or more sub-configurations is enabled when multiple sub-configurations are included or associated with a same CSI reporting configuration.
