(54) Title: METHOD AND SYSTEM FOR HANDWRITING RECOGNITION

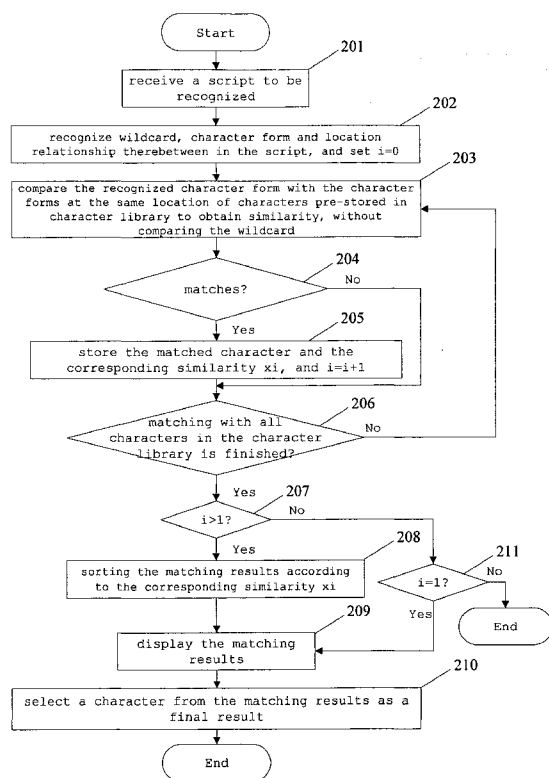

Fig.2

(57) Abstract: A handwriting recognition method and device is provided. The method comprises the steps of: inputting a script to be recognized; recognizing the wildcard and element of the input script; matching the recognized element and the wildcard information with characters pre-stored in a character library; and displaying matching results. The present invention provides a handwriting recognition method using wildcard, which reduces the number of input strokes of a handwritten character and improves the input efficiency.
