DATA RECORDING MEDIUM MANAGEMENT METHOD,
DATA RECORDING MEDIUM MANAGEMENT DEVICE
AND DATA RECORDING MEDIUM

ABSTRACT OF THE DISCLOSURE

When data is recorded at a virgin cluster on a data track of an MD data disc, write data is written at a position corresponding to the allocation blocks for recording the write data after NULL data has been written to the write buffer for a one cluster portion. The data for the one cluster portion written to the write buffer is then recorded to the cluster on the data track, so that an initialization process is no longer required.
