(54) **Title:** TRACKING AND COMPARING CHANGES IN A DESIGN INTERFACE

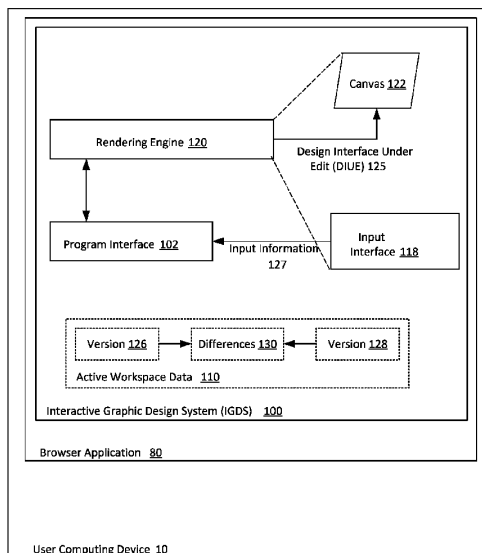

FIG. 1A

(57) **Abstract:** A network computer provides interactive graphic design system instructions for execution at a user computing device. The user computing device determines a first set of differences between a first version of a design interface and a second version of the design interface based on a comparison of a first set of workspace data for the first version of the design interface with a second set of workspace data for the second version of the design interface and renders on a canvas, the first version of the design interface for display to a user at the user computing device. The user interface also renders, within the canvas, one or more visual representations of the first set of differences between the first version of the design interface and the second version of the design interface.
