(54) Title: STRUCTURAL SLIDING BEARING

FIG. 3A

(57) Abstract: The present invention relates to a structural sliding bearing (1) having at least one sliding surface (2) with a sliding plate (3) and a mating surface which are in sliding contact so that the sliding plate (3) can move relative to the at least one mating surface, and the mating surface is arranged on a backing plate (4), wherein the mating surface is formed as a sliding sheet (5). The sliding sheet (5) is configured to have a sliding sheet protrusion 6 which projects at least partially beyond the backing plate (4). Further embodiments of the invention provide for arrangements as an earthquake protection device and as a spherical plain bearing.
