

ULTRAVIOLET-CURABLE PRESSURE SENSITIVE ADHESIVE COMPOSITION
AND ULTRAVIOLET-CURABLE PRESSURE SENSITIVE ADHESIVE SHEET

ABSTRACT

Disclosed is an ultraviolet-curable pressure sensitive adhesive composition comprising an ultraviolet-curable pressure sensitive adhesive component and a phosphorus type
5 photopolymerization initiator. Also disclosed is an ultraviolet-curable pressure sensitive adhesive sheet obtained by coating a substrate with the ultraviolet-curable pressure sensitive adhesive composition. The ultraviolet-curable pressure sensitive adhesive composition
10 is capable of retaining ultraviolet curing properties even if the ultraviolet-curable pressure sensitive adhesive sheet is brought into contact with wash water for a long period of time.
