(54) Title: HYBRID DEVICE AND PERSON BASED AUTHORIZED DOMAIN ARCHITECTURE

(57) Abstract: This invention relates to a system and a method of generating an Authorized Domain (AD) by selecting a domain identifier, and binding at least one user (P1, P, PN1), at least one device (D1, D2, ..., DM), and at least one content item (C1, C2, ..., CNZ) to the Authorized Domain (AD) given by the domain identifier (Domain ID). Hereby, a number of verified devices (D1, D2, ..., DM) and a number of verified persons (P1, P2, ..., PN1) that is authorized to access a content item of said Authorized Domain (100) is obtained. In this way, access to a content item of an authorized domain by a user operating a device is obtained either by verifying that the content item and the user is linked the same domain or by verifying that the device and the content item is linked to the same domain. Thereby, enhanced flexibility for one or more users when accessing content in an authorized domain is obtained while security of the content is still maintaining. This is further done in a simple, secure and reliable way.
