

ABSTRACT

An object of the present invention is to provide a lignin derivative compound that can efficiently improve physical properties of asphalt. The present invention
5 provides: an additive for an asphalt composition, in which the additive contains a lignin derivative compound that contains a constituent unit (I) derived from a lignin compound and a constituent unit (II) derived from an aromatic water-soluble compound including at least an
10 aromatic water-soluble compound having an alkylene oxide chain, and an asphalt composition containing the lignin derivative compound and asphalt.
