

A DEVICE ADAPTED TO BE FIXED TO A WALL BLINDLY

ABSTRACT

A device adapted to be fixed to a wall blindly and including:

5 - a threaded base which is pushed through a hole formed through said wall and includes:

 - a shank having a free end,

 - flexible teeth having a radial bearing surface facing away from said free end, and

10 - a head adapted to be screwed onto the base.

The device further includes an elastically compressible member adapted to be compressed by a radial force and covering at least part of said shank in the vicinity of the teeth at the end opposite the free end of
15 the shank.
