ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.*

(54) Title: CORNEAL BIOMETRY

(57) Abstract: The present invention relates broadly to a method for validating the identity of a person using corneal imaging techniques. The method involves capturing an image of a person's cornea where the cornea is divided into a grid or map (10). The method then involves deriving one or more geometric parameters from a plurality of points obtained from the grid or map (10). The geometric parameters are compared with corresponding reference geometric parameters of a database for validation of the identity of the person.
