

**Method for producing at least one spring contact pin or a spring contact pin arrangement,
and corresponding devices**

Abstract

The invention relates to a method for producing at least one spring contact pin (9) acting as an electrical contact, or a spring contact pin arrangement (25) comprising at least one such spring contact pin (9). The following steps are provided: - producing at least one base part (8) of the spring contact pin (9), at least one section of said base part (8) being made of plastic, and – subsequently metallising at least the section of the base part (8) that is made of plastic.
