

ABSTRACT

5 [Problem] To provide a floating-type structure that can be constructed at low cost and in a short delivery time. [Solution] A floating-type structure retrofitted to a liquefied-gas carrier ship provided with a hull part in which a membrane-type or self-supporting prismatic-type storage tank is mounted, the floating-type structure comprising the hull part, a projecting part which is fixed to the hull part and which projects to at least one side in the width direction of the hull part, and a
10 gas-processing facility positioned in the projecting part, the projecting part and the gas-processing facility being portions that are added during the retrofitting.
