

ABSTRACT OF THE DISCLOSURE

A solar panel with a pattern includes a substrate and an electricity generating layer. A patterned light-transmittable layer is coated on a face of the electricity generating layer. The patterned light-transmittable layer has a transmittance that permits
5 light rays transmitting the patterned light-transmittable layer to form incident rays incident to the substrate and reflective rays reflected by the substrate. The incident rays and reflective rays are sufficient to generate electricity in the electricity generating layer.
