

1/32

FIG. 1

100

2/32

FIG. 2

200

form a first layer, the first layer including an electrically conductive nanostructured material

202

form a second layer over a membrane, the second layer including cellulose material, over the first layer so that an intermediate layer including the electrically conductive nanostructured material and the cellulose material is formed between the first layer and the second layer by interspersing of the electrically conductive nanostructured material between the cellulose material, thereby forming a stacked structure including the first layer, the second layer and the intermediate layer

204

separate the stacked structure from the membrane to form the conductive paper
