

Abstract

DECORATIVE COMPONENT AND ARTICLE INCLUDING THE SAME

A decorative component (7) includes: a frame (110) fixed to an article; a body-to-be-suspended (10, 20); and a suspending portion (32) provided to the frame 110. The suspending portion (32) suspends the body-to-be-suspended (10, 20) such that the body-to-be-suspended (10, 20) is swingable about an imaginary swing axis (AX). The body-to-be-suspended (10, 20) and the suspending portion (32) are held in contact with each other at two contact points (0) located on the imaginary swing axis (AX). The frame (110) covers a part of a periphery of one of the two contact points (0) in one of outer ranges (RE), and covers a part of a periphery of another one of the two contact points (0) in another one of the outer ranges (RE), the parts being not covered with the article.
