

Synergistic mixture

Abstract

- 5 A synergistic mixture comprising from 1 to 99.9% by weight of compounds having structural elements (I)

- 10 in which the free valencies on the oxygen atom and on the nitrogen atom may be combined to form a five-, six- or seven-membered ring and the benzene ring may also bear substituents at one or more of the free positions, and from 0.1 to 99% by weight of sulfur-containing organic compounds with antioxidant action. This synergistic mixture is suitable as a stabilizer for stabilizing inanimate organic material, especially mineral oil
- 15 products and fuels, against the action of light, oxygen and heat.
