

ABSTRACT OF THE DISCLOSURE

SYSTEM AND METHOD FOR TIMED DATA TRANSMISSION

A method is disclosed. The method comprising receiving, by a processor computer from a coordination computer, a push transfer instruction message comprising a recipient address associated with a recipient, a data item, and a time period for transferring the data item to a recipient account associated with the recipient address. The method also includes storing, by the processor computer, the push transfer instruction message. After the time period, the push transfer instruction message comprising the data item is transmitted to a recipient authorizing entity computer associated with the recipient address to transfer the data item.

FIG. 1
