

Abstract

**Guardrail section with a movable running gear, guardrail system,
5 road switch, and method for displacing a guardrail section**

The invention relates to a guardrail section (1) comprising a
deflector body (2) with a running gear (3) movable in a standby
position and a travel position. The running gear (3) can be
10 brought from a standby position into a travel position by a
lifting device (4). The lifting device (4) has a longitudinal
axis (7) in its direction of force application. The longitudinal
axis (7) of the lifting device (4) is arranged in relation to
the longitudinal direction (17) of the deflector body (2) in an
15 angular range of 45° to 85°. The invention also relates to a
guardrail system which comprises a plurality of adjustable
guardrail segments and a guardrail section (1).
Furthermore, the invention relates to a road switch with at
least one adjustable tongue and a method for displacing a guard-
20 rail section.
