ABSTRACT

Object: To provide an antisense guide RNA for editing a target RNA by ADAR.

Solution: An antisense guide RNA for editing a target RNA by ADAR, containing at least one functional region and an antisense region that is complementary to a portion of the target RNA and can form a double strand with the target RNA, in which the at least one functional region is linked to the antisense region, and in which the guide RNA does not substantially contain an ADAR-recruiting base sequence.
