(54) Title: SYSTEM FOR TRANSFERRING CRYOGENIC PRODUCT BETWEEN TWO SHIPS PLACED SIDE BY SIDE

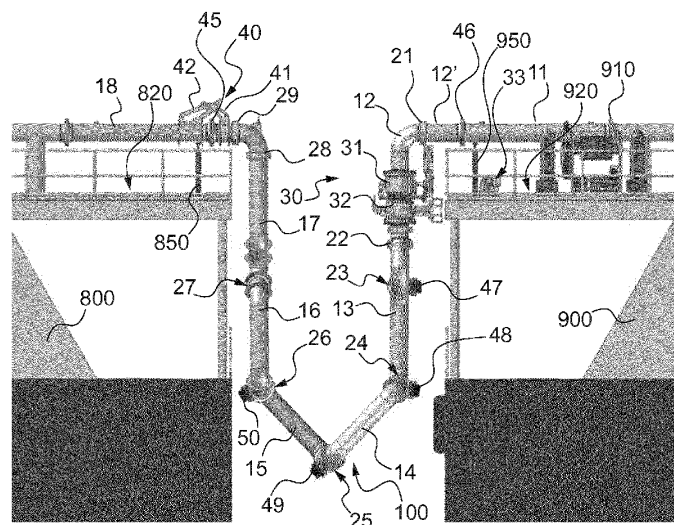

Fig. 1

(57) Abstract: The present invention concerns a system for the transfer of cryogenic product from a first floating structure (800) for storage and transport of cryogenic product to a second fixed or floating structure (900) for storing cryogenic product, by means of a transfer pipe able to transport the cryogenic product. The system comprises a transfer pipe, itself comprising at least three rigid sections of pipe (12-17) fluidically connected each to the next by connection means (21 to 27) able to transport the cryogenic product, each of the two end sections of pipe (12, 17) having a free end configured as a tip for connection to a connection device of the first floating structure (800) and respectively of the second floating structure (900). The present invention also concerns a method of fluidically connecting a device for the transport of cryogenic product.
