ABSTRACT

DEVICE FOR RAISING AQUARIUM FISH AND ITS RECEPTACLE ASSEMBL

A device for raising aquarium fish is a combination of a water tank (1) and a receptacle assembly (4). The water tank (1) has an upper opening, a lid (L) for closing the upper opening and provided with an illumination mechanism and a filtration mechanism, and a fastening portion (3c). The receptacle assembly (4) is for supplying electricity to the illumination and filtration mechanisms and has a fastened portion (7) for engagement with the fastening portion (3c) of the water tank (1). The receptacle assembly (4) includes an assembly body (4a) open at one side, accommodating a plurality of receptacles (9) therein and having a receptacle cover (10) disposed inside the assembly body (4a) at a position spaced a predetermined distance from the open side of the assembly body (4a) for positioning and fixing the plurality of receptacles (9), and an assembly holder (7) having a lateral wall portion (7a) attached to the assembly body (4a) and a vertical wall portion (7b) extending from the lateral wall portion (7a) toward the open side of the assembly body (4a) at a distance from the assembly body (4a).
