(54) Title: EVENT BASED AMBIENT LIGHTING CONTROL

(57) Abstract: In controlling an ambient lighting element, a host event is detected, a light script associated with the detected event is retrieved and the retrieved light script is rendered in correspondence with the detected event. A user may associate the light script with the event and/or an event type that corresponds to the event. A default association of events and/or event types may be provided, although these default associations may be modified by the user. An event type that corresponds to the event may be identified and a light script associated with the identified event type may be rendered in response to the detected event.
