**3. Abstract of the invention: “Methods and Systems for Rewarding a User of a Group Remittance Transaction”**

The present invention provides methods and systems for rewarding the user on scheduling at least one remittance transaction. The method includes: rendering a user interface to receive authentication credentials of the user; providing one or more reward options to schedule the at least one remittance transaction on authenticating the user with the authentication credentials, wherein each reward option requires the user to schedule the at least one remittance transaction with a group remittance transaction; receiving an input from the user regarding the selection of the at least one reward option; determining an eligibility of the user to schedule the at least one remittance transaction with the group remittance transaction and receive the at least one reward option; and providing a reward associated with the at least one reward option on completion of the at least one remittance transaction.
