ABSTRACT

An individual use procedure and a procedure including a charging process for each of provision vendors of various applications, content, and services is simplified. A portal site system 1 is connected with servers 2A, 2B, and 2C of a plurality of vendors and a client terminal 3 of a user via a network 4, and guides the user to applications, content, and services provided by the vendors. When the user selects an application, content, or a service, the portal site system 1 executes a use procedure with a vendor. A record collection system 41 analyzes a use history at the time of use, and calculates a fee for the vendor based on the collected use record.
