ABSTRACT

The present invention discloses a method and an apparatus for identifying a pickup and delivery standard for an express, a device, and a storage medium. The method includes acquiring a name of a consignment to be queried; performing feature extraction on the name of the consignment to be queried to obtain an embedding vector of the name of the consignment to be queried, and performing query from a preset consignment delivery database according to the embedding vector and the name of the consignment to be queried to obtain a name of a target consignment and a customs code corresponding to the name of the target consignment; and querying a preset policy database for a policy document by using the customs code to obtain a target policy document, and organizing the target policy document to obtain a pickup and delivery standard for the consignment characterized by the name of the consignment to be queried. The method achieves the query of express related policies by using a name of an express consignment and can quickly obtain a pickup and delivery standard of an international express.
