ABSTRACT

An apparatus for growing beansprouts; comprising a plurality of containers 1,2 for growing the sprouts therein mounted vertically one above the other extended above one end of a water tank 4 whereby the containers
5 comprises movable plates 9,10 to stabilize the seed bed, and movable bases 5,6,7,8 at the bottom of each container, enabling its movable base to move from a position of closing the bottom to a position of opening the bottom, thereby allowing sprouts grown within the
10 container to fall into the tank; where the tank having a means to convey the sprouts received from the containers end of the tank to the other end of the tank.
