(54) Title: STAIR OR LADDER STEPS OF THE PLATE-SHAPED STEP TYPE

(57) Abstract

A stair step (1) of the plate-shaped step type comprises plate members (7, 8, 9, 10) bent downwards from the stepping surface (2) at all four rims (3, 4, 5, 6), said plate members being welded together at the corners where they abut one another. The plate members (7, 8, 9, 10) at the front and rear rims are rolled over to form cylindrical pipes (11, 12) in such a manner that the plate member (7) at the front rim (3) is rounded at the bottom whereby it is avoided that a foot gets jammed between the steps of a staircase. The cylindrical pipes (11, 12) are filled with a foamed insulating material, such as polyurethane foam.
