

AGRICULTURAL WORKER MANAGEMENT SYSTEM AND METHOD

An agricultural worker management system and method. The system comprising:
5 a data acquisition unit (DAU) having location information associated with a worker; one
or more memory modules having stored thereon at least one pre-defined worker
management rule, wherein the one or more memory modules further having stored
thereon a plurality of tasks for the worker, and a processor in communication with the
one or more memory modules and the DAU to receive the location information
10 associated with the worker, wherein the processor is configured to select a task for the
worker based on the location information associated with the worker and at least one
worker management rule.
