Abstract

VEHICLE NUMBER DATA PROCESSING SYSTEM, VEHICLE NUMBER DATA PROCESSING METHOD, VEHICLE NUMBER DATA PROCESSING DEVICE, PROGRAM, AND RECORDING MEDIUM

A vehicle number data processing system includes a plurality of imaging devices which continuously captures an image of a road and are installed so that imaging areas thereof overlap each other, and a vehicle number data processing device processing vehicle number data. The vehicle number data processing device includes a vehicle number data integration unit configured to reserve one of one piece of vehicle number data and another piece of vehicle number data along with deleting the other of the one piece of vehicle number data and the another piece of vehicle number data to thereby integrate the vehicle number data including information regarding the same vehicle, wherein the one piece of vehicle number data include information regarding a vehicle number obtained by performing the optical character recognition on an image captured by one of the imaging devices, and the another piece of vehicle number data include information regarding a vehicle number obtained by performing the optical character recognition on an image captured by another of the imaging devices having the imaging area overlapping the imaging area of the one of the imaging devices.
