

ABSTRACT

POWDERY COMPOSITION AND TABLET FOR HEXAVALENT CHROMIUM
TREATMENT AND METHOD FOR PRODUCING LEATHER

5

A powdery composition for hexavalent chromium treatment contains a hexavalent chromium reducing compound component capable of reducing hexavalent chromium into trivalent chromium, and a component capable of trapping moisture in air and dissolving in water. The hexavalent chromium reducing compound component contains an organic compound (A) having the structure represented by chemical formula (1) and capable of acting on hexavalent chromium for reduction into trivalent chromium, having a hydroxyphenyl group, and having no aldehyde groups and no carboxy groups.
