

ABSTRACT

A data processing method, system and apparatus, a device, and a storage medium, relating to the technical field of computers. The method is implemented by a node device storing a smart contract in a blockchain system, and comprises: obtaining data to be processed, and when a data processing mode is an off-chain processing mode, generating a data processing request; sending the data processing request to a computer device outside the blockchain system by means of the smart contract; receiving a data processing result returned by the computer device; and performing consensus on the data processing result to obtain a first consensus processing result.
