# SYSTEM AND METHOD FOR CUSTOMIZED TAPE-OUT REQUESTS FOR INTEGRATED CIRCUIT MANUFACTURING

## ABSTRACT

The present disclosure provides a system and method for a tape-out request. In one example, the method includes receiving initial information from a customer and loading a mask tooling template based on the initial information. A mask tooling form may be customized based on metal layer information provided by the customer via mask tooling template and answers to questions provided to the customer. The method may then generate logical operations based on information received from the customer via the mask tooling form.
